---

The first turbines at the Assela 100 MW wind farm have begun supplying electricity to the national grid, marking a major step in the country's renewable energy expansion.

MS Ventilation is a locally established company featuring indigenous wind turbine roof ventilators for the first time in Ethiopia. The locally-made hi-tech wind turbines are used to exhaust heat, smoke, dust, ...

This study contributes to showcase Addis Ababa's transition towards renewable energy by identifying potential energy sources in built environments and designing high-rise buildings with wind ...

The research paper aims to examine the status, challenges, and opportunities in developing, deploying, and sustaining wind power generation. This was accomplished through ...

Relying on renewable energy source has its own part to play and every small contribution have a meaning effect and role. This paper is about designing Small Scale wind turbine as an alternate ...

Ethiopia has abundant renewable energy resources and has the potential to generate over 60,000 megawatts (MW) of electric power from hydroelectric, wind, solar and geothermal sources.

The GOE is now working to diversify the generation mix with other sources such as solar, wind, and geothermal that will result in a more climate-resilient power system.

This paper is about designing Small Scale wind turbine as an alternate power source for Addis Ababa city residents. In this paper, the airfoil based on the wind data of Addis Ababa has been designed ...
