Learn battery types, replacement steps, and life tips to keep your SimpliSafe security system working without fail. Stay powered, stay safe.

Base stations commonly use 12V, 24V, or 48V battery systems. Correct voltage alignment ensures efficiency and prevents equipment damage. 48V is the industry standard for most telecom ...

* Do not replace the battery of your SimpliSafe base station with a non-rechargeable battery; this may cause the battery to corrode, therefore damaging the cells.

Base uses Lithium Iron Phosphate (LFP) battery technology, which is one of the safest options available. Unlike other battery types, LFP is more stable under high temperatures and is far less likely to overheat or catch fire.

The Base Station takes four (4) 1.2V, 1300mAh nickel-metal hydride (NiMH) rechargeable batteries. Regular alkaline batteries should never be inserted into the Base Station, as they may damage the device.

Choosing the wrong type not only increases O& M costs but may also lead to power outage risks. This guide breaks down the selection logic across three key dimensions: core specifications, scenario ...

Yes. The manual says using non-rechargeable batteries can cause the batteries to corrode.

Your Base Station comes pre-installed with four (4) NiMH (nickel-metal hydride) rechargeable batteries, which are kept charged by your Base Stations. These batteries should never be replaced with alkaline type ...

The battery pack should comply with international safety standards such as UL, CE, and IEC to ensure safe use in telecom base stations. Additionally, it should meet environmental regulations like RoHS.
