What is energy storage container?

SCU uses standard battery modules, PCS modules, BMS, EMS, and other systems to form standard containers to build large-scale grid-side energy storage projects.

What is a mobile energy storage system?

On the construction site, there is no grid power, and the mobile energy storage is used for power supply. During a power outage, stored electricity can be used to continue operations without interruptions. Maximum safety utilizing the safe type of LFP battery (LiFePO<sub>4</sub>) combined with an intelligent 3-level battery management system (BMS);

What is a battery management system (BMS)?

The BMS provides real-time battery status to the EMS, which processes this data to make decisions and sends instructions to the PCS for execution. For instance, if BMS detects high temperature, EMS may halt discharging via PCS to prevent damage.

What is BMS & PCs & EMS?

As BESS adoption grows--projected to reach terawatt-hours by 2030--these systems will evolve to support smarter grids and electric mobility. In summary, BMS, PCS, and EMS are the backbone of BESS, ensuring safe, efficient energy storage. By understanding their roles and integration, stakeholders can harness BESS for a sustainable future.
