This study aims to provide useful information on Benin's RE situation by collecting data and analysing them from journal articles, official reports and available websites. This will help draw ...

The document from the International Solar Alliance outlines Benin's solar energy landscape, highlighting its significant potential due to high solar irradiation levels of around 5.3 kWh/m²/day.

The Government of Benin has approved an updated National Renewable Energy Development Policy (PONADER) for 2020-2030, making solar power central to its national strategy.

Benin experiences 5.0 to 5.5 kWh/m²/day of solar irradiation on average. The southern parts of the country, including Porto-Novo, benefit from abundant sunlight throughout the year.

Benin is taking significant strides in renewable energy, with plans to install 150 MW of solar power capacity by 2026. This ambitious goal is part of the government's broader agenda to ...

Of all the available renewable resources in Benin, solar has the greatest potential, and is the easiest to implement for solving problems in the Republic of Benin.

Specifically for Benin, country factsheet has been elaborated, including the information on solar resource and PV power potential country statistics, seasonal electricity generation variations, LCOE estimates ...

Looking ahead, Benin's energy planners are modeling future generation scenarios to meet sustainability targets by 2050. With abundant solar and biomass resources, the country has the ...

Solar radiation in Benin ranges from 3.5 to 5.5 kWh per square meter per day, with higher potential in the north of the country. Annual photovoltaic production is therefore estimated at 1,560 ...
