Should you use a wind generator on a cruising sailboat?

Since we're already using the wind to move us from place to place, it makes sense to use that same energy source to keep our batteries charged up and ready for action. Wind generators are increasingly becoming a standard feature on cruising sailboats, and a wide range of products have emerged to meet the demand.

How do I choose a marine wind generator?

When choosing a marine wind generator, buyers should consider factors like power output and efficiency in low winds. They also need to consider durability under harsh marine conditions, noise levels, and ease of installation. Below, we explore top-rated wind generators across budget-friendly, high-performance, compact, and low-noise categories.

What is a 2000 watt marine wind turbine?

This is the big boy: a full-on 2000 watt marine wind turbine, ready to install and power up some serious juice to feed those hungry batteries. The unit is designed to be effectively maintenance-free, with a coated cast aluminum body and carbon fiber blades engineered for quiet operation.

Should you use a wind generator or a towed generator?

Many sailors find that a wind generator combined with a solar array is the most effective power solution, and some add a towed generator that generates power when dragged through the water as an additional option. The power mix that best suits you is something you'll have to decide, but there's a good chance that wind will be part of it!
