Should you use solar photovoltaic and solar thermal technology together?

The most obvious benefit from pairing solar photovoltaic and solar thermal technology is the space saving. Many people install photovoltaic panels and solar thermal panels separately, whereas having a hybrid means you only need one panel, which is great if you have a limited amount of roof space.

What are PV-T solar panels?

PV-T Solar panels, also known as photovoltaic-thermal solar panels or hybrid solar panels, are hybrid systems that convert solar energy simultaneously into electricity and thermal energy.

Can solar PV-T panels sit on a roof?

As with solar panels, solar PV-T panels can either sit on your roof or be integrated within it. The positioning, and ease of installation, depends on which brand of solar PV-T panels you're using. At their best, the panels are sleek and small, and fit easily into smaller roof spaces.

Why do solar panels need a PVT system?

Traditional solar panels convert sunlight into electricity, but they often become hot, which reduces their efficiency. The PVT system captures this heat and puts it to use, making the solar panels more efficient overall.

Leading the way in PV-T (solar photovoltaic-thermal) design, development and delivery Convert Energy's hybrid panels generate both heat and power.

The SPRING4 hybrid PVT panels can be easily integrated with an existing domestic hot water tank or pool heating system. By preheating the water, the SPRING panels reduce energy consumption using ...
