China is currently planning to build a gigantic solar power station ...

Space-based solar power plants would easily produce gigawatts of power, matching the electricity output of nuclear power plants. In contrast, the U.K.'s largest solar power plant, Shotwick...

China is currently planning to build a gigantic solar power station in space. To get parts of the array out of our atmosphere, scientists are working on a reusable heavy lift rocket called the...

While photovoltaics are more efficient per unit area, and thus better to use on personal rooftops and the like, solar thermal plants like this one are arguably better for mass energy ...

Solar technologies convert sunlight into electrical energy either through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. This energy can be used to generate electricity or be ...

When the sun is shining, PV systems can generate electricity to directly power devices such as water pumps or supply electric power grids. PV systems can also charge a battery to provide ...

Space-based solar power, the collection in space of solar energy, which is then transmitted as a microwave or laser beam to the ground and converted into electrical energy.

Solar power is energy from the Sun. Spacecraft that orbit Earth, called satellites, are close enough to the Sun that they can often use solar power. These spacecraft have solar panels ...

Scientists are also investigating the feasibility of space-based solar power, which would collect sunlight from space and beam the energy back to Earth, potentially serving remote locations ...

It sounds like science fiction: giant solar power stations floating in space that beam down enormous amounts

Can giant objects generate electricity from solar energy

of energy to Earth. And for a long time, the concept - first developed by the...

Solar panel and biorefinery designers could learn a thing or two from iridescent giant clams living near tropical coral reefs, according to a new study.
