What is solar cold storage?

1. Introduction Solar cold storage is a cold storage solution that uses solar photovoltaic power generation to power the cold storage refrigeration system and combines it with energy storage devices to achieve all-weather, low-carbon, and energy-saving refrigeration solutions.

How does a solar-powered storage room work?

The cold energy is sent to the storage room using an ultra-low power consumption pump. A heat exchanger and a control system guarantee reliable cold transfer and air distribution to the storage room. With the solar-powered Cold Room, different products can be cooled down independently of any infrastructure using only the sun's energy.
