presents a following method: location selection and network optimization for the wireless communication network. First, it collects the experimental data set of base station locati.

### Bayesian Optimization Framework for Channel Simulation-Based Base Station Placement and Transmission Power Design

The study aims to enhance the transmission efficiency and stability of signals in complex environments by optimizing the communication transmission performance of the IMAC system.

To address these challenges, this paper constructs a multi-objective base station site selection model that simultaneously minimizes costs, maximizes coverage contributions, and ...

This study proposes an adaptive experimental design framework for channel simulation-based base station (BS) design that supports joint optimization of transmission power and placement.

Signal coverage quality and strength distribution in complex envi-ronments pose severe challenges, leading to the inadequacy of traditional two-dimensional base station models under the pressure of ...

The simulation results show that the proposed adaptive mutation genetic algorithm and AES not only optimize the deployment layout of base stations, reduce the construction cost of base ...

In this paper, the major work is to solve the &quot;blind spot&quot; of 5G existing network BSs. In other words, it aims to solve the signal coverage problem of weak coverage points on the basis of 5G ...

In order to achieve the technical purpose, the invention adopts the following technical scheme: a method for enhancing and intelligently optimizing coverage on demand based on a 6G air base...

To address these issues, this article proposes a mathematical model for optimizing 5G base station coverage and introduces an innovative adaptive mutation genetic algorithm (AMGA) to ...
