-----

A RBS attack occurs when an attacker uses a fake base station (FBS) to mimic a legitimate base station, luring phone users to connect and facilitating activities like stealing personal information and ...

Rogue base stations, also known as fake base stations, operate without authorization, often to perform malicious activities. They can disrupt communications, intercept data, or even impersonate ...

Hi, I'm experiencing an issue with my Yealink W90DM and W90B base stations. The base stations are using DECT Sync (not LAN Sync), and all firmware is ...

These attacks involve malicious actors setting up unauthorized base stations to intercept, manipulate, or degrade communication between legitimate users and network operators. In this blog, we will ...

We designed and built a defense scheme which detects and blacklists a fake base station and then, informed by the detection, avoids it through link routing for connectivity availability.

False base stations execute attacks in the Radio Access Network (RAN) of cellular systems, adversely affecting the network or its users. To address this challenge, we propose a ...

The present invention belongs to the field of abnormality detection of base station intelligent operation and maintenance, and in particular to a communication base station...

Base station communication is abnormal any help?

A fake base station is a well-known security issue in mobile networking. The fake base station exploits the vulnerability in the broadcasting message announcing.

Recent breakthroughs in photonic error correction (PEC) algorithms now enable self-healing base stations to

# Communication with base station is abnormal

autonomously reroute signals around damaged components.
