How to design a photovoltaic power plant?

An important element of a PV array design in photovoltaic power plants is the design of PV array spacing. The formula for calculating the PV array spacing. The module array must consider the shadow shading buildings by calculation. The general principle of determination is that the PV array should not be solar time).

Why do we need a mountain PV array system?

Secondly, a mountain PV array system is proposed to ensure that the system can still operate at the maximum power point in real-time when the solar radiation intensity changes drastically due to unpredictable environmental variables.

How much power does a mountain PV array system generate?

photovoltaic array system. The research results of this paper are summarized as follows: generation of the mountain PV array system is 483Wh. The power generation of the mountain shows that the mountain PV array system is more efficient and more profitable.
