-----

In an effort to reduce the use of precious land to build renewable energy storage facilities, the Fraunhofer Institute has been cooking up a wild but plausible idea: dropping concrete ...

Fraunhofer Institute created the StEnSea project to store energy within the ocean depths. Underwater spheres use natural deep-sea pressure to operate an innovative method for efficient ...

Deep sea pumped hydro storage is a novel approach towards the realization of an offshore pumped hydro energy storage system (PHES), which uses the pressure in deep water to store energy in ...

In a groundbreaking advance for renewable energy, researchers from Norway and Germany have developed a pioneering underwater energy storage system that turns ocean pressure ...

What if the key to storing solar power isn't on rooftops or in batteries--but hidden deep beneath the waves? That's exactly what researchers at Germany's Fraunhofer Institute are ...

Off the coast of California, engineers are preparing to sink a hollow concrete sphere that works like an underwater battery. They're calling it StEnSea style storage. The prototype will rest on ...

Fraunhofer's ocean spheres store renewable energy using deep-sea pressure--enough to power millions of homes annually.

If Germany's Fraunhofer Institute for Energy Economics and Energy System Technology (IEE) has its way, it could soon turn the ocean floor into a giant battery -- one concrete sphere at a ...

In the quest for sustainable energy solutions, researchers are diving deep into the oceans to unlock new potential. The innovative concept of using underwater concrete spheres to ...

Germany's Fraunhofer Institute has unveiled an innovative solution that taps into the power of the deep sea to

# Deep energy storage project

store electricity - the StEnSea (Stored Energy in the Sea) project.
