How many generator sets are installed on the second floor?

There are ten generator sets installed on the second floor of the building and seven generator sets on the ground floor directly below. There is a building located directly across from the discharge openings. A CFD model was prepared to look at the restriction on the fans for the lower and upper generator sets.

How can a generator set be simulated?

Generator sets must be properly installed to ensure that cooling air is not restricted or artificially heated by nearby heat sources or from recirculation. Fortunately, installation influences can be simulated using software called Computational Fluid Dynamics. CFD is a software tool used to predict fluid flow, including thermal influences.
