How do I choose the right inverter size for my AC well pump?

Getting the right inverter size for your AC well pump basically revolves around three factors: how much power your pump uses, how long it runs, and how much surge power it needs to start up. Keep reading to learn what size inverter is recommended for AC well pumps and the models that work best for different pump sizes.

Do well pumps need an inverter?

Well pumps, which run on AC power, require an inverter to operate in off-grid systems or during power outages. The size of the inverter required for your AC well pump depends on a few critical factors: Wattage of the Pump: Inverter sizes are rated by their wattage capacity. To select the right inverter, you must know the wattage of your well pump.

Do I need an inverter size chart?

The need for an inverter size chart first became apparent when researching our DIY solar generator build. Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly.

How to choose a water pump inverter?

Consider Starting Power: Water pumps often require higher power during startup. Ensure the inverter can handle the initial surge in power demand. Account for Future Expansion: If you plan to add more pumps or increase the system's capacity, choose an inverter with a higher power rating to accommodate future needs. 3.

Well pumps use a lot of power, so an inverter has to be the right size to work. Factors to consider are watts, pump type and running time.
