After a massive lithium-ion battery storage site exploded into ...

Last month, a battery-storage plant went up in flames and burned for days, prompting the evacuation of more than 1,000 residents and shutting down local schools.

In January, a lithium-ion battery-storage plant in Monterey County, Calif., caught fire and burned for days, prompting evacuations and school shut downs. Residents are concerned about their...

Moss Landing, California's lithium-ion battery (LIB) storage facility, one of the largest in the world and part of the Moss Landing Power Plant, began burning on January 16, 2024.

BESS: A stationary energy storage system using battery technology. The focus of the database is on lithium ion technologies, but other battery technology failure incidents are included.

According to news from the electric family, a lithium battery energy storage tank caught fire in a place called Barban in Saucats, France, within an hour last Tuesday local time.

As a major fire abated near San Jose, Calif., that ravaged one of the world's largest battery energy storage facilities, investigators have begun an onsite probe of the cause.

After a massive lithium-ion battery storage site exploded into flames in Monterey County -- spewing toxic gases into the air and scattering heavy metals over the ground -- residents have...

When battery energy storage facilities burn, the makeup of the chemical fallout can be a mystery for surrounding communities. Yet, these batteries often contain metals that are toxic to...

After Moss Landing, what's next for battery storage? The fire that destroyed a 300-MW battery installation is

Lithium battery energy storage power station caught fire and exploded

a "learning opportunity" for a safety-conscious industry, experts say.

Let's catch up on what happened in this fire, what the lingering concerns are, and what comes next for the energy storage industry.
