This paper provides an original investigation on the determination of the battery pack capacity considering the estimation error using a Capacity-Quantity diagram.

How to repair a lithium battery pack by troubleshooting charging, swelling, and voltage issues. Follow safe, simple steps to restore battery performance.

In this post, you'll learn exactly how to tell if a LiFePO₄ battery is bad by spotting five key signs before they lead to complete failure. Whether you're running solar storage systems, EV fleets, ...

For industrial operations relying on lithium-ion batteries (Polymer, NMC, LiFePO₄, LTO), unexpected failure means costly downtime and disruption. Understanding why batteries fail, recognizing the ...

The term overcharged-low discharge refers to a mismatch between the battery pack's charging and discharging capacity. For example, a pack rated at 100Ah may appear to charge up to 105Ah, but ...

Struggling with lithium-ion battery failures? Discover crucial insights into the leading causes and how to prevent and manage them effectively.

Even with a fancy battery bank, you might run into this issue. If you're stuck with a Lithium-ion battery that just won't be fully charged, there are some easy tricks to try. Let's figure out why your power's ...

Error codes are like little messages from your BMS, telling you what's going wrong and how to fix it. In this blog post, I'll walk you through the process of interpreting these error codes, so ...

How to size your storage battery pack : calculation of Capacity, C-rating (or C-rate), ampere, and runtime for battery bank or storage system (lithium, Alkaline, LiPo, Li-ION, Nimh or Lead batteries).

Do you have a lithium battery pack that quits unexpectedly? It might swell, rapidly lose capacity, or even

Lithium battery pack capacity error

become a safety risk. This is battery failure, often caused by a few main issues.
