What is an off-grid Solar System?

An off grid solar system is a standalone power generation setup that operates independently from the electrical grid. Unlike grid-tied systems that can sell excess power back to utilities, off-grid systems store all generated electricity in batteries for use when the sun isn't shining. The system consists of four main components working together:

What is the difference between off-grid solar and on-grid solar?

Subject to grid outages. Off-grid systems are ideal for those seeking energy autonomy or living in remote areas where the public grid is unavailable. In contrast, on-grid solar systems are better suited for homes and businesses with stable access to the grid but wanting to offset energy costs.

How much does an off grid solar system cost?

Mid-Range Kit (\$15,000-25,000): Premium Kit (\$30,000+): Off grid solar systems represent a mature and increasingly affordable path to energy independence. With proper planning, quality components, and professional installation or careful DIY work, these systems can provide decades of reliable, clean power.
