How has the electric vehicle market changed in Portugal in 2025?

The Portuguese electric vehicle (EV) market achieved remarkable growth in January 2025, marking the best start to the year in the last six years for both new and imported used battery electric vehicles (BEVs). A total of 5,399 BEVs were registered, an increase of 40.97% compared to January 2024.

Will Portugal's EV sales growth be enough?

Portugal's EV sales penetration rate has seen healthy growth and is ahead of most other European nations. Its charging sufficiency is less impressive, however, and growth in public charging infrastructure should accelerate to meet government targets. Encouraging growth, but will it be enough?

Does Portugal have a good EV infrastructure?

Portugal has achieved strong electric vehicle (EV) adoption--approximately 25-32% new-car EV penetration by 2023--but infrastructure growth must accelerate to keep pace. Its interoperable, nationally unified public network (MOBIE) supports 7,000-8,000 public charge points today, including ~37% DC units.

How many electric vehicles are there in Portugal?

In December 2024, Portugal registered over 10,000 electric vehicles, marking the highest monthly figure recorded to date. This milestone capped a strong year, as more drivers embraced the cost savings and long-term value of EV ownership.

Plug-in electric vehicle sales represented just under a quarter of Portugal's total passenger car sales, including an 11.4 percent market share for battery-electric vehicles (BEVs).
