The present disclosure relates generally to electric power systems, and more particularly bidding strategies for virtual power plants with mobile energy storages.

This study focuses on maximizing VPP profits through smart bidding strategies across Day-Ahead (DA), Real-Time (RT), and Balancing Markets, while considering the operational ...

In this context, this paper studies the bidding strategy of the virtual power plant with photovoltaic and wind power.

Abstract: Virtual Energy storage (VES) has great potential in satisfying multiple operational requirements of grid-connected microgrids with renewable energy resources.

This paper proposes a novel collaborative optimization framework for Virtual Power Plants (VPPs) equipped with Energy Storage System (ESS), which integrates risk-aware learning into the joint ...

Abstract-- In this paper, a novel approach to define the optimal bidding of renewable-only virtual power plants (RVPPs) in the day-ahead, secondary reserve, and intra-day markets is proposed.

The results of numerical experiments prove that the proposed energy scheduling and bidding strategies increase the economic benefits by 28%, significantly reducing the peak load by ...

This study contributes comprehensive assistance and valuable insights to both practitioners and researchers involved in the field of sustainable energy transition through Virtual Power...

Abstract--This paper proposes a stochastic optimization-based energy and reserve bidding strategy for a virtual power plant (VPP) with mobile energy storages, renewable energy resources (RESs) and ...

Single-phase bidding for modular energy storage cabinets for virtual power plants
