CATL has introduced sodium-ion batteries with a potential cost reduction to \$10/kWh, using sodium's abundance and safety to address energy storage challenges. Sodium-ion batteries...

Sodium-ion batteries have emerged as the first commercially viable alternative to lithium-ion technology, achieving \$55-70/kWh cell costs in 2026--a 35-40% discount to lithium iron ...

The Chinese battery manufacturer's Nextra sodium-ion system achieves 175 Wh/kg energy density while promising 10,000+ charge cycles, positioning it within a sodium-ion market ...

Is the "battery a lithium killer? Our brutally honest guide goes beyond the science to reveal the disruptive economics of Sodium-Ion and includes a simulator to show its impact on EV ...

While EVs are still the largest segment of the battery market, energy storage has outpaced EV battery growth, increasing by 48% year over year. Electric vehicles and energy storage drove ...

The present work applies a bottom-up cost model for determining expected future price trends between lithium-ion (LIB) and sodium-ion batteries (SIB) and incorporates both storage ...

We compare projected sodium-ion and lithium-ion price trends across over 6,000 scenarios while varying Na-ion technology development roadmaps, supply chain scenarios, market ...

According to BloombergNEF (BNEF), the average price of lithium-ion (Li-ion) battery packs was at \$108 in December 2025, but that number includes energy storage systems (ESSs), ...

And while today's sodium-ion cells are not meaningfully cheaper, costs are expected to drop as production scales. China, with its powerful EV industry, has led the early push. Battery...

Sodium-ion battery energy storage electricity price

Sodium-ion batteries (SIBs) could offer a promising cost-reduction alternative to lithium-ion batteries (LIBs), according to a report from the International Renewable Energy Agency (IRENA).
