Transformer model shows the lowest errors when forecasting PV power production. The accurate prediction of photovoltaic (PV) energy production is a crucial task to optimise the integration ...

Accurate solar PV power generation prediction techniques are essential to overcome these challenges. This chapter proposes a short-term PV power generation prediction framework by ...

In order to improve the accuracy of medium and long-term photovoltaic power prediction, a unique hybrid deep learning model named interactive feature trend transformer (IFTformer) has ...

REMTF recommends the use of the single-machine equivalent representation to model central-station PV plants in WECC base cases. This representation is also considered adequate for positive ...

This paper proposes a model called X-LSTM-EO, which integrates explainable artificial intelligence (XAI), long short-term memory (LSTM), and equilibrium optimizer (EO) to reliably ...

Models of actual or proposed PV systems generally need two types of inputs: design specifications or actual design parameters, and environmental data.

WECC approved the use of two generic dynamic models for solar PV plants: (a) a model consisting of plant controller, electrical controls, and grid interface modules intended for large-scale ...

With regard to optimizing safety and reducing the costs of power system operations, an accurate and reliable solar power forecasting model would be a significant step forward.

This paper presents a comprehensive review conducted with reference to a pioneering, comprehensive, and data-driven framework proposed for solar Photovoltaic (PV) power generation...

Solar PV power generation system framework model

This review has outlined a pioneering, comprehensive framework for solar PV power generation prediction, addressing a critical need due to the intermittent and stochastic nature of RESs.
