It is the only moon in the solar system known to have a dense atmosphere. Four uncrewed spacecraft have visited Saturn, obtaining images and data that have greatly increased knowledge about the planet.

All these objects orbit, or revolve around, the Sun. Together, the Sun and all its smaller companions are known as the solar system. The solar system itself orbits the center of the Milky Way Galaxy, ...

Solar energy is radiation from the Sun that is capable of producing heat, causing chemical reactions, or generating electricity. The total amount of solar energy incident on Earth is ...

Jupiter, the most massive planet of the solar system and the fifth in distance from the Sun. It is one of the brightest objects in the night sky; only the Moon, Venus, and sometimes Mars are more ...

Pluto, large, distant member of the solar system that formerly was regarded as the outermost and smallest planet. It also was considered the most recently discovered planet, having ...

With each planet, moon, asteroid, and comet, the solar system tells a story of birth, destruction, rebirth, and motion--stories written in craters, frozen ...

The Solar System is so named by its most prominent member - the Sun. Going from center outward, the Solar System consists of the Sun, 4 "terrestrial" planets, an asteroid belt, and the four gas giant planets.

Our solar system is made up of the sun and all the amazing objects that travel around it.

Our solar system includes the Sun, eight planets, five officially named dwarf planets, hundreds of moons, and thousands of asteroids and ...

There are eight planets in the solar system. The four inner terrestrial planets are Mercury, Venus, Earth, and Mars, all of which consist mainly of rock. The four outer planets are Jupiter, ...

Solar System Basics

The solar system consists of the Sun and everything that orbits, or travels around, the Sun. This includes the eight planets and their moons, dwarf planets, and countless asteroids, comets, and ...

Solar System basics for kids: learn how the Sun, 8 planets, moons and other bodies interact through gravity, their orbits, temperatures, and unique fun facts.

Upon completion of this chapter, you will be able to classify objects within the solar system, state their distances of in terms of light-time, describe the Sun as a typical star, relate its ...

What Is the Solar System? (Formal Definition) The Solar System is the gravitationally bound system comprising the Sun and all natural objects that ...

At the center of the solar system lies the Sun, an average star in the Milky Way Galaxy. The solar system also includes all the objects that orbit the Sun-- planets, moons, asteroids, comets, and ...

How many planets are in the solar system? How did it form in the Milky Way galaxy? Learn facts about the solar system's genesis, plus its ...
