Last November, a Chinese solar company named Deye remotely shut down solar power systems in the United States, the United Kingdom, and Pakistan. "This inverter is not allowed use [sic] at ...

The so-called solar switch-off or remote solar shut-down mechanism is a "last resort" measure devised by AEMO and electricity networks to ensure rooftop solar systems can be curtailed or remotely ...

In this video, I explain how inverter cybersecurity became one of the biggest threats to solar independence.

Over the past nine months, the suspect devices were found in inverters and batteries from multiple Chinese suppliers by US experts who strip down equipment to check for security issues before they are connected to ...

When firefighters arrive to battle a blaze at a home without solar panels, they can shut off the main power and rest assured there is no dangerous voltage in the home.

Most solar panels shut off during outages for safety, but battery backup systems keep your power on. Learn costs, options, and how to prepare your home.

During fires or accidents, rapid shutdown devices allow emergency responders to disconnect solar panels swiftly. This minimizes the risk of electrical shock and fire spread.

Hidden inside some of these farms were tiny devices known as "kill switches". These are special parts that could turn off the solar equipment remotely, without anyone's permission or...

Rapid shutdown requirements are designed to ensure the immediate and safe disconnection of solar energy systems in emergencies. Understanding these requirements can help you make informed ...

Around November 15, 2024, a significant number of residential and small-scale solar users across the U.S. began reporting mysterious outages. Their systems, powered by solar inverters ...
