The C-shaped steel ground mounting system is a robust and versatile solution designed specifically for installing solar photovoltaic panels on the ground. This system plays a crucial role in maximizing ...

Our roll form machinery can do solar panel support profiles, U Profile, C Profile and additionally support profiles for PVC windows and doors. Also we produce gypsum board profiles.

The Carbon Steel C-Channel Ground Mounting System is a robust and cost-effective solution designed for large-scale ground-mounted solar power installations.

It's a solid, efficient way to mount big solar setups, works well even on tricky land. Basically, the C-shaped steel piles give a steady base for the solar panels.

? Q235B/Q355B ? : Standard carbon steel for inland projects (cost-effective, tensile strength: 375-500 MPa). ? Q355D/Q420C ? : Low-alloy grades for Arctic applications (e.g., -35°C impact ...

The cross-sectional shapes of C-shaped steel (such as C60, C75, C80, etc.) are designed to easily fit with photovoltaic module frames or clamp, ensuring precise and stable ...

If you have engineering project needs, we can customize the solar mounting system solution for you according to your project location, climate environment, cost budget and so on.

Our products are delivered as drilled, shaped, cut to desired length and galvanized in accordance with the demands of our customers in our fully automatic lines. C shape is used as purlin and belt in steel ...

Compared to traditional H-shaped steel or square tubes, C-Channel Steel Post excel in bending and compression resistance, making them particularly suitable for withstanding the ...

Solar panels for photovoltaic use C-shaped steel

Profile C is made from premium Zinc-Aluminum-Magnesium (Zn-Al-Mg) steel, which offers lightweight properties and excellent corrosion resistance. This advanced material withstands harsh weather ...
