Chemical industry requires electricity, steam, and thermal energy for its sustainability. Solar thermal can pave the way towards reducing CO₂ emissions. The challenges and opportunities ...

To facilitate this transition, it is crucial to integrate renewable energy, such as solar energy and wind energy, into chemical processes. However, the intermittent nature of renewable energy ...

This paper evaluates the thermo-economics of power-to-chemicals using solar energy, with the chemicals being methane, methanol, and gasoline. In addition to ...

In this context, we here present a perspective about the role of solar energy and feedstocks within the chemical industry to produce chemicals with a reduced carbon footprint.

According to Manu Karan, Vice President of CleanMax, solar power can be a very effective supplementary source of energy for chemical plants. There are, however, a few roadblocks in the ...

His laboratory develops solar-powered valorization technologies for the conversion of water, carbon dioxide, and solid waste streams such as biomass and plastics to fuels and chemicals ...

In this work, a chemical solar-driven "mini-plant" centred around a scaled-up luminescent solar concentrator photomicroreactor (LSC-PM) was built.

The chemistry and concept of solar reforming, suggestions of key metrics and proposed directions to realize solar-powered refineries for a future circular economy are discussed.

Concentrating solar power (CSP) with thermal energy storage has the potential for grid-scale dispatchable power generation. Thermochemical energy storage (TCES), that is, the reversible...

Solar-powered container exchange in chemical plant

Contact MGetEnergy today to explore how we can help you install a Solar Power System in the chemical industry. Visit or call us at +91 97177 43325 / +91 98218 76325 for a ...
