What is a demand response?

Demand Response (DR) is defined as a measurable change in electrical demand by customer or Load Providers in response to a curtailment notice. Reducing electricity power to production equipment. Turning of air conditioning units. Shutting off lights.

What is a demand response programme?

Demand response (DR) is defined as a measurable change in energy demand by customers in response to a curtailment notice. Demand response assists utilities with balancing energy supply and demand. A demand response programme can quickly remove load off the electricity network during peak demand or emergency periods, when it is needed most.

What is Eskom's demand response & distribution demand management programme?

It has put the proverbial power back in the hands of the people, evolving from passive energy users to active participants. In South Africa, Eskom launched the Demand Response and Distribution Demand Management Programme just over a year ago. The programme followed the successful industrial Demand Response Programme, which is now in its 11 th year.
