With a significant deployment of renewable energy capacity, Spain stands out in this report for two factors that go beyond traditional solar energy and wind sources in the field of storage.

Enlight Renewable Energy is expanding its Gecama Wind Project in Spain, by integrating solar PV and battery energy storage systems (BESS).

The Spanish energy agency has proposed funding for 144 energy storage sites totaling 2.61 GW and 11.14 GWh under a European Regional Development Fund program.

Solar plants accounted for 79%, while wind accounted for the remaining 21%. Between January and September 2025, there are 4,269.8 MW of capacity in storage projects that began their ...

The integration of this new renewable capacity, mostly wind and power solar photovoltaic, represented a significant boost to the energy transition and the fulfilment of the integration roadmap set out in ...

Spain's energy transformation is at a pivotal moment. The solar and wind pipeline is booming, and the grid is increasingly saturated during peak renewable production hours.

The program supports hybrid projects, which combine storage with renewable energy, such as solar or wind farms. Spain's electricity grid already generates more than half of its power ...

An increasing number of PV park developers and owners in Spain combine their assets with battery storage and wind turbines.

The government activates six support schemes totalling EUR1.3695bn to boost strategic projects in energy storage, efficiency, offshore wind, thermal networks and industrial transition. A line ...

Spanish wind solar and energy storage base

Spain has streamlined permitting for solar PV and wind plants, and increased grid capacity for new renewable energy projects. Government auctions are key to renewable energy ...
