Elon Musk targets 100 GW of annual solar manufacturing for both Tesla and SpaceX within three years to solve the energy bottleneck threatening the AI revolution.

After years of relying heavily on imported solar panels and their components, U.S. domestic solar module production capacity is finally on the up. Thanks to major policy shifts and investment incentives, ...

This expansion follows Tesla's recent unveiling of a new generation of U.S.-made solar panels and a redesigned mounting system, which the company says can cut installation times by up to 33%.

The Economics of Scale Solar panel manufacturing requires substantial capital investment in equipment and facilities. Tesla inherited much of that infrastructure through the Gigafactory New York ...

Today, US solar manufacturing facilities can produce over 51 gigawatts (GW) of solar modules annually --enough capacity to meet nearly all domestic demand for solar installations.

In Q3 2025, the residential segment installed 1,088 MWdc of solar capacity, declining 4% year-over-year and quarter-over-quarter. Despite an industry rush to bring projects online this year to qualify for tax ...

Explore the latest solar panel technology, new solar panel technology, and solar energy technology trends improving efficiency.

We explore the nine most exciting developments in the solar industry in 2025, from indoor solar panels to "two-for-one" fission. What kind of home do you live in? combine traditional silicon with a synthetic ...

Tesla announced that it started to produce its own new solar panel at Gigafactory New York in Buffalo. The first deliveries are expected in Q1 2026. After years of neglecting its solar...

In May 2024, solar accounted for 8.7% of all U.S. electricity production, and from March through October

The latest in solar panel production

2024, solar accounted for more than 7.5% of all U.S. electricity production.
