What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system. PV systems can also be installed in grid-connected or off-grid (stand-alone) configurations.

How does a photovoltaic system work?

To comprehend the intricate choreography of the photovoltaic effect, one must first grasp the fundamental concepts of solar radiation and semiconductor physics. Solar radiation, the radiant energy emitted by the sun, serves as the primary source of energy for PV systems.

What type of electricity does a solar panel use?

AC is the type of electrical current used when you plug appliances into normal wall sockets. What's the difference between solar PV panels and solar thermal panels? Solar PV panels generate electricity, as described above, while solar thermal panels generate heat.

What is a photovoltaic (PV) cell?

A photovoltaic (PV) cell, commonly called a solar cell, is a nonmechanical device that converts sunlight directly into electricity. Some PV cells can convert artificial light into electricity. Sunlight is composed of photons, or particles of solar energy.
