OverviewFormsHistoryTransparent and translucent photovoltaicsGovernment subsidiesOther integrated photovoltaicsChallengesSee alsoThe majority of BIPV products use one of two technologies: Crystalline Solar Cells (c-SI) or Thin-Film Solar Cells. C-SI technologies comprise wafers of single-cell crystalline silicon which generally operate at a higher efficiency than Thin-Film cells but are more expensive to produce. The applications of these two technologies can be categorized by five main types of BIPV products:

What's the difference between solar PV panels and solar thermal panels? Solar PV panels generate electricity, as described above, while solar thermal panels generate heat. While the energy source is ...
