What is a wind cannon?

Like the Vortex Gun, the Wind Cannon was also developed by a factory in Stuttgart during the war. It was a type of gun that would eject a jet of compressed air against enemy aircraft. It was a strange device consisted of a large angled barrel like a bent arm resting in an immense cradle like some enormous broken pea-shooter lying askew.

How did the wind cannon work?

Like the Vortex Gun, the Wind Cannon was also developed by a factory in Stuttgart during the war. It was a type of gun that would eject a jet of compressed air against enemy aircraft. It consisted of a large angled barrel like a bent arm resting in an immense cradle. The cannon worked by the ignition of critical mixtures of hydrogen and oxygen.

What is a wind cannon & a vortex gun?

Wind Cannon Like the Vortex Gun, the Wind Cannon was also developed by a factory in Stuttgart during the war. It was a type of gun that would eject a jet of compressed air against enemy aircraft. It consisted of a large angled barrel like a bent arm resting in an immense cradle.

What is wind power?

Wind power is a form of energy conversion in which turbines convert the kinetic energy of wind into mechanical or electrical energy that can be used for power. Wind power is considered a form of renewable energy. Modern commercial wind turbines produce electricity by using rotational energy to drive a generator.

The Wind Cannon, or "Windkanone" (not to be confused with the vortex cannon by Mario Zippermayr), was an experimental vortex cannon type weapon, developed in Nazi Germany during ...

The Great Misunderstanding: When Wind Power Doesn't Mean Energy Picture this: you're at a county fair watching a pneumatic wind cannon blast paper targets into oblivion. The operator proudly claims ...

Imagine capturing a Category 5 hurricane in a steel muzzle and converting its fury into clean electricity. That's essentially what heavy wind cannon technology promises to achieve in the renewable energy ...
