---

However, rogue communication devices not listed in product documents have been found in some Chinese solar power inverters by U.S. experts who strip down equipment hooked up to ...

By making it possible to switch off inverters or sabotage grid-tied renewable installations, these backdoors pose a grave cybersecurity risk to U.S. energy infrastructure. Inverters are the ...

These undocumented communication modules offer an invisible back door into devices that regulate a growing share of the world's electricity. "It effectively means there is a built-in way to...

U.S. energy-sector forensic teams have begun disassembling Chinese-manufactured solar inverters and grid-scale batteries after discovering undocumented 4G/LTE modules and other wireless ...

Everything looked fine at first, but buried deep inside, they found something that wasn't listed in the manuals: A small communication module capable of sending and receiving signals.

While inverters are built to allow remote access for updates and maintenance, the utility companies that use them typically install firewalls to prevent direct communication back to China.

Over the past nine months, undocumented communication devices, including cellular radios, have also been found in some batteries from multiple Chinese suppliers, one of them said. ...

Technical experts conducting detailed hardware inspections, or "teardowns," of inverters connected to U.S. power grids revealed the presence of unauthorized communication modules, ...

Often described as the "brain" of solar systems, these devices manage power output and grid communication.

# Why doesn't Warsaw build a solar-powered communication cabinet inverter

U.S. officials found communication modules in some Chinese-made inverters ...
