The US Energy Information Administration (EIA) expects annual solar generation to surpass annual hydropower generation in 2024 for the first time.

The Energy Information Administration (EIA) released a report that forecasts solar will surpass total electricity generation from hydroelectric dams in 2024. EIA expects solar to produce ...

The boom in solar has been so great that according to forecasts from the US Energy Information Administration (EIA), by the end of 2024, solar generation will surpass hydroelectric ...

With the first three months of data in for 2025, it's clear this year is no exception: Solar power is up a staggering 44 percent compared to the prior year. That's the good news.

We forecast that the United States will generate 14% more electricity from solar energy than from hydroelectric facilities in 2024, according to our Short-Term Energy Outlook (STEO). Our ...

The United States is on the brink of a significant milestone in its renewable energy landscape: the annual generation of electricity from solar power is expected to surpass that from hydropower in 2024.

Solar surpassed hydro on a monthly basis in September 2022, but next year will be the first time the threshold is crossed on an annual basis. The crossover is likely to be permanent.

U.S. solar energy is expected to surpass hydropower in 2024, as revealed by EIA's latest report. Keep reading to learn what's driving this change.

The solar energy landscape in the United States is experiencing remarkable growth, with projections indicating that solar power will surpass hydroelectric generation by 2025.

The U.S. will produce 14% more electricity from solar power than from hydroelectric in 2024, according to

Will solar power surpass hydropower

the Energy Information Administration. Why it's happening: The rapid growth in ...
