By understanding the common types of blade failures and implementing effective repair strategies, wind turbine operators can minimize downtime, reduce maintenance costs, and maximize the energy ...

Wind turbine blades are essential for converting wind energy into electricity. However, their constant exposure to harsh conditions--like rain, hail, debris, and extreme ...

Texas filed a lawsuit against a wind turbine recycling company, alleging it illegally dumped thousands of turbine blades and parts across the state. Republican Attorney General Ken Paxton ...

Wind turbine blade lifetime and performance are two central concerns for wind farm operators and blade manufacturers. Leading edge erosion has been identified as the main factor substantially reducing ...

Attorney General Ken Paxton sued Global Fiberglass Solutions, Inc. ("Global") and other affiliated entities for illegally dumping thousands of wind turbine blades and materials at two disposal ...

Severe sand and dust storms are prevalent in western China, causing erosion of wind turbine blades and reducing their aerodynamic efficiency.

Texas has sued Global Fiberglass Solutions for allegedly abandoning over 3,000 wind turbine blades at unpermitted sites in Sweetwater. The state claims the company failed to recycle the ...

These incidents can result in catastrophic damage, property damage, and even loss of life. The most common external wind turbine failure is typically damage to the blades caused by bird ...

A review of the root causes and mechanisms of damage and failure to wind turbine blades is presented in this paper. In particular, the mechanisms of leading edge erosion, adhesive joint degradation, ...
