-----

Wind turbine operations with erosion occur when the leading edges of wind turbine blades are eroded. Leading edge erosion (LEE) appears on many wind turbine blades. Leading edge protection (LEP) ...

The blades on the newest wind turbines sweep an area longer than a football field and are nearly impossible to recycle. At the end of their life span of around 20 years, they are chopped into ...

In December of 2023 all three blades were torn off a turbine in Ayrshire, Scotland during a storm. The Daily Mail described it as "...the blades suddenly (coming) loose and flung across a ...

On Feb 1 at 2:11 am, one of the turbine's 11-story tall blades flew the full length of a football field and plowed a 4-feet deep furrow in a wheat field. The heavy-duty bolts that kept the ...

In 2019, an image from Casper Regional Landfill in Wyoming showing piles of long, white blades waiting to be buried went viral, prompting criticism of the environmental credentials of wind...

Let's go. The Challenge of Wind Turbine Maintenance Wind farms demand 24/7 vigilance. Blades face ice accretion, cracks from fatigue and lightning strikes. Traditional inspections can be: Slow: ...

Having their land permanently contaminated by shredded fibreglass when turbines explode into balls of flame and/or their blades merely disintegrate (known in the trade as "component ...

In the waning days of January, a worker delivering fertilizer to a wheat farm in the rolling hills of Sherman County found some broken, industrial-size bolts on the ground near one of Portland...

Workers replacing the blades on a Vestas V82 wind turbine at Portland General Electric's Biglow Canyon wind farm in late June. The turbine threw one of its blades into a wheat.
